

All in one capture Station for creating identification documents

ABSTRACT OF THE DISCLOSURE

5 An all in one capture station for creating photo identification documents combines the functions of a camera assembly and computer workstation into a single device. This device can be operated in a shared mode where it is controlled via one or more other workstations, or a stand alone mode, where it performs all of the functions needed to prepare an identification document. The all in one capture station includes a camera stand,
10 a camera mounted within the camera stand, and a computer integrated into the camera stand. The computer includes a processor, network interface device, and memory. The memory stores a camera control program and a network interface program for transferring camera control commands and image data between the capture station and a remote workstation so that the capture station can operate under the control of the remote
15 workstation to capture data for incorporation into an identification document.
